

## 6th Grade CCSS Math Vocabulary Matching 10

Write the word that best matches each definition or clue.

- |                                 |                                                                                                                                            |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 1. <u>DIVISOR</u>               | The number by which another number is divided.                                                                                             |
| 2. <u>FACT FAMILY</u>           | A group of related facts that use the same numbers. Also called related facts.                                                             |
| 3. <u>EXPANDED FORM</u>         | A way to write numbers that shows the place value of each digit.                                                                           |
| 4. <u>FACTOR PAIRS</u>          | A set of two whole numbers that when multiplied will result in a given product.                                                            |
| 5. <u>FUNCTION TABLE</u>        | A table that lists pairs of numbers that follow a rule.                                                                                    |
| 6. <u>ENDPOINT</u>              | A point at either end of a line segment, or a point at one end of a ray.                                                                   |
| 7. <u>FORMULA</u>               | A rule that is written as an equation.                                                                                                     |
| 8. <u>GREATER THAN</u>          | Used to compare two numbers when the first number is larger than the second number.                                                        |
| 9. <u>ESTIMATE</u>              | To find a number close to an exact amount.                                                                                                 |
| 10. <u>GALLON</u>               | A customary unit of capacity that equals 4 quarts.                                                                                         |
| 11. <u>EQUAL</u>                | Having the same value.                                                                                                                     |
| 12. <u>EQUIVALENT FRACTIONS</u> | Fractions that have the same value.                                                                                                        |
| 13. <u>FOOT</u>                 | A customary unit of length that equals 12 inches.                                                                                          |
| 14. <u>EQUATION</u>             | A mathematical sentence with an equals sign. The amount on one side of the equals sign has the same value as the amount on the other side. |
| 15. <u>GRAM</u>                 | The standard unit of mass in the metric system.                                                                                            |
| 16. <u>FACTORS</u>              | The whole numbers that are multiplied to get a product.                                                                                    |
| 17. <u>EXPRESSION</u>           | A mathematical phrase without an equal sign.                                                                                               |
| 18. <u>FRACTION</u>             | A way to describe a part of a whole or a part of a group by using equal parts.                                                             |

A. factor pairs  
D. factors  
G. equivalent fractions  
J. fact family  
M. function table  
P. gallon

B. formula  
E. fraction  
H. equal  
K. expanded form  
N. greater than  
Q. foot

C. estimate  
F. equation  
I. endpoint  
L. divisor  
O. expression  
R. gram
