## 7th Grade CCSS Math Vocabulary List 1

1. acute angle
2. adjacent angles
3. algebraic expressions
4. bar notation
5. base of pyramid
6. census
7. circle
8. circumference of circle
9. coefficient
10. combine like terms
11. commission
12. common factor
13. complementary angles
14. congruent angles
15. constant of proportionality
16. convert
17. corresponding angles
18. cross section

An angle whose measure is greater than $0^{\circ}$ but less than $90^{\circ}$.
Two angles that share a common vertex and a common side.
Mathematical phrase involving at least one variable and sometimes numbers and operation symbols.

Used for repeating decimals. A bar is drawn of digits that repeat.
Single polygon face.
Collection of data from every member of a population.
Collection of points on the same plane equidistant from the same point.

Refers to the outside of a circle.
Number that is multiplied by a variable in an algebraic equation.
Simplify expressions by adding or subtracting like terms.
Amount of money a salesperson earns after selling a product.
A number or an algebraic expression that is a factor of two or more numbers or algebraic expressions.

Sum of their angle measures is equal to $90^{\circ}$.
Two or more angles that have equal measures.
Ratio between two values is always the same or constant.
Change it to an equivalent measurement in different units.
Angles that have the same relative position in geometric figures.
Formed by the intersection of a plane and a solid when a plane passes through the solid.
