

4th Grade CCSS Math Vocabulary Quiz 12

1. ___ Problems that ask how much more (or less) one amount is than another.
A.area model B.associative property of multiplication C.additive comparisons D.angle measure
2. ___ It tells how far one side is turned from the other side.
A.additive comparisons B.area model C.angle measure D.add
3. ___ Changing the groupings of three or more factors does not change the product.
A.angle measure B.area C.associative property of multiplication D.associative property of addition
4. ___ An arrangement of objects in equal rows.
A.array B.algorithm C.additive comparisons D.add
5. ___ Changing the groupings of three or more addends does not change the sum.
A.array B.area model C.associative property of addition D.angle
6. ___ Part of a circle between any two of its points.
A.associative property of multiplication B.area model C.arc D.angle measure
7. ___ A way of setting out a step-by-step mathematical procedure.
A.algorithm B.area C.arc D.add
8. ___ A model of multiplication that shows each place value product.
A.array B.angle C.area model D.arc
9. ___ Two rays that share an endpoint.
A.acute angle B.angle C.area D.angle measure
10. ___ The measure in square units of the inside of a plane figure.
A.associative property of multiplication B.associative property of addition C.area D.algorithm
11. ___ An angle with a measure of less than 90° .
A.angle B.acute angle C.arc D.associative property of addition
12. ___ To join two or more numbers or quantities to get one number called the sum or total.
A.angle measure B.associative property of addition C.add D.area
