1. An angle with a measure of less than $90^{\circ}$.
2. A way of setting out a step-by-step mathematical procedure.
3. It tells how far one side is turned from the other side.
4. Two rays that share an endpoint.
5. The measure in square units of the inside of a plane figure.
6. Changing the groupings of three or more addends does not change the sum.
7. Changing the groupings of three or more factors does not change the product.
8. Part of a circle between any two of its points.
9. Problems that ask how much more (or less) one amount is than another.
10. A model of multiplication that shows each place value product.
11. To join two or more numbers or quantities to get one number called the sum or total.
12. An arrangement of objects in equal rows.
area
add
associative property of addition acute angle
arc
angle measure
array
angle
additive comparisons algorithm
area model
associative property of multiplication
