1. Capacity refers to the amount of liquid a container can hold.
2. A characteristic of an object, such as color, shape, size, etc.
3. To sort into categories or to arrange into groups by attributes.
4. Fractions that are commonly used for estimation.
5. To put together components or basic elements.
6. Changing the order of the addends does not change the sum.
7. To decide if one number is greater than, less than, or equal to.
8. A plane figure with all points the same distance from a fixed point called a center.
9. A metric unit of length equal to 0.01 of a meter.
10. Changing the order of the factors does not change the product.
11. Used to represent larger and smaller amounts in a comparison situation. Different lengths of bars are drawn to represent each number.
12. A common multiple of the denominators of two or more fractions.
classify
