1. To put together components or basic elements. 7. To decide if one number is greater than, less than, or equal to.
2. A characteristic of an object, such as color, shape, size, etc.
3. A common multiple of the denominators of two or more fractions.
4. Changing the order of the factors does not change the product.
5. Capacity refers to the amount of liquid a container can hold.
6. To sort into categories or to arrange into groups by attributes.
7. Fractions that are commonly used for estimation.
8. Changing the order of the addends does not change the sum.
9. A plane figure with all points the same distance from a fixed point called a center.
10. A metric unit of length equal to 0.01 of a meter.
11. Used to represent larger and smaller amounts in a comparison situation. Different lengths of bars are drawn to represent each number.
compare
capacity
centimeter
commutative property of addition
attribute
circle
common denominator
compose
benchmark fractions
classify
comparison bars
commutative property of multiplication
