1. Fractions that are commonly used for estimation.
2. Used to represent larger and smaller amounts in a comparison situation. Different lengths of bars are drawn to represent each number.
3. A plane figure with all points the same distance from a fixed point called a center.
4. Changing the order of the factors does not change the product.
5. To decide if one number is greater than, less than, or equal to.
6. Capacity refers to the amount of liquid a container can hold.
common denominator
centimeter
capacity
circle
classify
attribute
compose
commutative property of addition
benchmark fractions commutative property of multiplication comparison bars compare
