1. A line that divides a figure into congruent halves that are mirror images of each other.
2. A part of a line with two endpoints.
3. When a fraction is expressed with the fewest possible pieces. Also called simplest form.
4. A set of connected points continuing without end in both directions.
5. A metric unit of capacity equal to $1 / 1000$ of a liter.
6. The basic unit of capacity in the metric system equal to 1,000 milliliters.
7. A standard unit of length in the metric system equal to 3.2808399 feet.
8. Denominators in two or more fractions that are the same.
9. A customary unit of length equal to 5,280 feet.
10. A diagram showing frequency of data on a number line.
11. The amount of matter in an object.
12. A system of measurement based on tens. Basic units - capacity:liter, length:meter, mass:gram.
like denominators
milliliter
