- How long something is. The distance from one point to another. Measured in units such as inches, feet, centimeters, etc.
- A fraction expressed in simplest form. The numerator and denominator have no factor in common except 1.
- A term for a fraction whose numerator is greater than or equal to its denominator.
- A metric unit of length equal to 1000 meters
- A part of a line with two endpoints.
- A line that divides a figure into two congruent halves that are mirror images of each other.
- Denominators in two or more fractions that are the same.
- The amount of matter in an object.
- One of the equal parts when a whole is divided into 100 equal parts.
- Lines that cross at a point.
- A customary unit of length. There of 12 of these in 1 foot.
- A comparison made when the first number is smaller than the second number.
- Operations that undo each other.
- The basic unit of capacity in the metric system.
- A unit of time that equals 60 minutes.
- A metric unit of mass equal to 1000 grams.
- A set of connected points continuing without end in both directions
- A diagram showing frequency of data on a number line

like denominators
line segment
kilogram
inverse operations
lowest terms
liter

improper fraction
hundredth
intersecting lines
line
less than
mass

inch
line of symmetry
length
line plot
hour
kilometer
