1. To combine or to put together two or more quantities
2. Compares how much more or less one amount is than another.
3. To sort into categories or to arrange into groups by attributes.
4. A plane figure with all points the same distance from a fixed point called a center.
5. A common multiple of the denominators for two or more fractions.
6. Any number being added.
7. A model of multiplication that shows each place value product.
8. The measure in square units of the inside of a plane figure.
9. Refers to the amount of liquid a container can hold.
10. The measure of the size of an angle.
11. A metric unit of length equal to 0.01 of a meter.
12. A step-by-step method for computing
13. Part of a circle between any two of its points.
14. An arrangement of objects in equal rows.
15. Two rays that share an endpoint.
16. An angle with a measure less than 90 degrees.
17. To determine if one number is greater than, less than, or equal to another number.
18. Characteristics, properties, or features which allow items to be sorted and classified.

capacity	common denominator	angle measure
centimeter	area model	circle
classify	add	attributes
area	angle	algorithm
arc	acute angle	compare
array	additive comparison	addend
