1. The amount of matter in an object.
2. The basic unit of capacity in the metric system.
3. Lines that cross at a point.
4. A line that divides a figure into two congruent halves that are mirror images of each other.
5. A customary unit of length. There of 12 of these in 1 foot.
6. How long something is. The distance from one point to another. Measured in units such as inches, feet, centimeters, etc.
7. Operations that undo each other.
8. A unit of time that equals 60 minutes.
9. A diagram showing frequency of data on a number line
10. A part of a line with two endpoints.
11. A set of connected points continuing without end in both directions
12. A term for a fraction whose numerator is greater than or equal to its denominator.
13. Denominators in two or more fractions that are the same.
14. A comparison made when the first number is smaller than the second number.
15. A metric unit of length equal to 1000 meters
16. One of the equal parts when a whole is divided into 100 equal parts.
17. A fraction expressed in simplest form. The numerator and denominator have no factor in common except 1.
18. A metric unit of mass equal to 1000 grams.

inverse operations	line segment	length
line of symmetry	line	like denominators
line plot	hundredth	mass
kilometer	liter	improper fraction
kilogram	intersecting lines	less than
inch	hour	lowest terms
