1. Simplify expressions by adding or subtracting like terms.
2. Change it to an equivalent measurement in different units.
3. Sum of their angle measures is equal to $90^{\circ}$.
4. Mathematical phrase involving at least one variable and sometimes numbers and operation symbols.
5. Two or more angles that have equal measures.
6. Ratio between two values is always the same or constant.
7. Formed by the intersection of a plane and a solid when a plane passes through the solid.
8. Single polygon face.
9. Amount of money a salesperson earns after selling a product.
10. Refers to the outside of a circle.
11. Used for repeating decimals. A bar is drawn of digits that repeat.
12. Number that is multiplied by a variable in an algebraic equation.
13. A number or an algebraic expression that is a factor of two or more numbers or algebraic expressions.
14. Two angles that share a common vertex and a common side.
15. Collection of points on the same plane equidistant from the same point.
coefficient
circle
cross section
base of pyramid
bar notation
congruent angles
combine like terms
circumference of circle
adjacent angles
common factor
convert
constant of proportionality
complementary angles algebraic expressions commission
