1. Two adjacent angles that have noncommon sides that form a line.
2. Order numbers least to greatest then find the middle value or find average of two middle values.
3. Angles on the outside of a triangle.
4. When values vary so that one increases or decreases a specific amount, the other value increases or decreases by a constant.
5. Equal to twice the radius of the circle.
6. Mathematical sentence that is created by placing an equal sign between two expressions.
7. Result of a single trial of an experiment.
8. Average of data set.
9. Average of the absolute values of the deviations of each data value from the mean.
10. Circle that fits exactly within the boundaries of another shape.
11. In a data set, this is the value(s) that occurs most often.
12. Decimal neither terminates nor repeats.
13. Two numbers that when multiplied together equal 1.
14. Measure of the exterior angle of a triangle is equal to the sum of the measures of the two remote interior angles of the triangle.
15. Decimal that continues without end.
multiplicative inverse
outcome
mean
inscribed circle
mean absolute deviation
mode
non-terminating decimal exterior angle theorem median equation
direct variation non-repeating decimals diameter
exterior angles linear pair
