1. Distance from the center of a circle to a point on the circle.

2. Maximum minus minimum.

3. Original amount of money invested.

4. Angle whose measure is equal to 90°.

5. Equation that states that two ratios are equal.

6. Ratio of the circumference of a circle to its diameter.

7. Decimal in which a digit or a group of digits repeats without end.

8. Measure of the likelihood that an event will occur.

9. In statistics it is a characteristic used to describe a population.

10. Data from part of a population.
11. Entire set of items from which data can be selected.

12. Polyhedron formed by connecting one polygonal face to several triangular faces; they are classified by their bases.

13. Ratio that compares two quantities that are measured in different units.

14. A sample that is selected from the population in such a way that every member of the population has the same chance of being selected.

15. New amount is greater than the original amount. It is a ratio of the amount of increase to the original amount.

pyramid	principal	pi
proportion	parameter	range
repeating decimal	radius	probability
percent increase	rate	population
random sample	sample	right angle
