1. Operations that undo each other.
2. Equal to twice the radius of the circle.
3. Largest factor that two or more numbers or terms have in common.
4. Mathematical sentence that is created by placing an equal sign between two expressions.
5. Angles on the outside of a triangle.
6. Angle whose measure is greater than $90^{\circ}$ but less than $180^{\circ}$.
7. Decimal neither terminates nor repeats.
8. Measure of the exterior angle of a triangle is equal to the sum of the measures of the two remote interior angles of the triangle.
9. Circle that fits exactly within the boundaries of another shape.
10. Result of a single trial of an experiment.
11. Order numbers least to greatest then find the middle value or find average of two middle values.
12. Average of the absolute values of the deviations of each data value from the mean.
13. Two adjacent angles that have noncommon sides that form a line.
14. When values vary so that one increases or decreases a specific amount, the other value increases or decreases by a constant.
15. In a data set, this is the value(s) that occurs most often.
obtuse angle
direct variation
inscribed circle
non-repeating decimals
inverse operations
exterior angles
exterior angle theorem
outcome
mean absolute deviation
mode
greatest common factor
linear pair
median
equation
diameter
