1. Operations that undo each other.
2. Equal to twice the radius of the circle.
3. Largest factor that two or more numbers or terms have in common.
4. Mathematical sentence that is created by placing an equal sign between two expressions.
5. Angles on the outside of a triangle.
6. Angle whose measure is greater than 90º but less than 180º.
7. Decimal neither terminates nor repeats.
8. Measure of the exterior angle of a triangle is equal to the sum of the measures of the two remote interior angles of the triangle.
9. Circle that fits exactly within the boundaries of another shape.
10. Result of a single trial of an experiment.
11. Order numbers least to greatest then find the middle value or find average of two middle values.
12. Average of the absolute values of the deviations of each data value from the mean.
13. Two adjacent angles that have noncommon sides that form a line.
14. When values vary so that one increases or decreases a specific amount, the other value increases or decreases by a constant.
15. In a data set, this is the value(s) that occurs most often.

obtuse angle	exterior angles	greatest common factor
direct variation	exterior angle theorem	linear pair
inscribed circle	outcome	median
non-repeating decimals	mean absolute deviation	equation
inverse operations	mode	diameter
