1. Representations of real objects or places that are in proportion to the objects or places they represent.
2. A characteristic used to describe the sample.
3. Terms in an expression may be expanded in a particular way to form an equivalent expression.
4. Ratio of side lengths in an enlargement to those of the original figure.
5. States that the sum of the lengths of any two sides of a triangle is greater than the length of the third side.
6. When two numbers are added/multiplied together, the sum/product is the same regardless of the order.
7. Amount the dependent value changes for every unit the independent value changes.
8. When three or more numbers are added/multiplied, the sum/product is the same regardless of the way in which the numbers are grouped. Parenthesis can move around, and the result will be the same.
9. Angle whose measure is equal to $180^{\circ}$.
10. Requires that two inverse operations be performed in order to isolate the variable.
11. Same size and shape.
12. States that the sum of the measures of the interior angles of a triangle is $180^{\circ}$.
13. Fixed percentage of the principal.
14. Event consisting of one outcome.
15. Collecting information about a certain group of people.
triangle sum theorem
statistic
triangle inequality theorem
commutative property
scale drawing
congruent
unit rate of change
scale factor
distributive property
survey
simple event associative property simple interest two-step equation straight angle
