1. Change it to an equivalent measurement in different units.
2. Single polygon face.
3. Amount of money a salesperson earns after selling a product.
4. Number that is multiplied by a variable in an algebraic equation.
5. Mathematical phrase involving at least one variable and sometimes numbers and operation symbols.
6. Formed by the intersection of a plane and a solid when a plane passes through the solid.
7. Collection of data from every member of a population.
8. Two or more angles that have equal measures.
9. Refers to the outside of a circle.
10. A number or an algebraic expression that is a factor of two or more numbers or algebraic expressions.
11. Used for repeating decimals. A bar is drawn of digits that repeat.
12. Angles that have the same relative position in geometric figures.
13. Ratio between two values is always the same or constant.
14. An angle whose measure is greater than $0^{\circ}$ but less than $90^{\circ}$.
15. Simplify expressions by adding or subtracting like terms.
congruent angles
constant of proportionality
corresponding angles
convert
cross section
base of pyramid
census
commission
algebraic expressions
circumference of circle
common factor
combine like terms
bar notation
coefficient
acute angle
