1. Change it to an equivalent measurement in different units.

2. Single polygon face.

3. Amount of money a salesperson earns after selling a product.

4. Number that is multiplied by a variable in an algebraic equation.

5. Mathematical phrase involving at least one variable and sometimes numbers and operation symbols.

6. Formed by the intersection of a plane and a solid when a plane passes through the solid.

7. Collection of data from every member of a population.

8. Simplify expressions by adding or subtracting like terms.
9. Two or more angles that have equal measures.

10. Refers to the outside of a circle.

11. A number or an algebraic expression that is a factor of two or more numbers or algebraic expressions.

12. Used for repeating decimals. A bar is drawn of digits that repeat.

13. Angles that have the same relative position in geometric figures.

14. Ratio between two values is always the same or constant.

15. An angle whose measure is greater than 0° but less than 90°.

congruent angles

constant of proportionality

corresponding angles

convert

cross section

base of pyramid

census

commission

algebraic expressions

circumference of circle

common factor

combine like terms

bar notation

coefficient

acute angle
