1. An angle on the interior of a plane figure.
2. A symbol for an unknown number usually expressed as a letter.
3. Not ordered and unpredictable.
4. Angles that have the same position on two different parallel lines cut by a transversal.
5. Identical in shape although not necessarily the 13 same size.
6. Please Excuse My Dear Aunt Sally (parentheses, exponents, multiply/divide from left to right, add/subtract from left to right).
7. The result of infinitely many applications of a recursive procedure to a geometric figure.
8. A measure of the steepness of a line on a graph.
9. To find the value of an expression.
10. Indicates how many times the base is to be used as a factor.
11. An expression used to calculate a desired result.
12. The set of $y$-values of a function or relation. A procedure that you do over and over each time building on the previous stage.
13. 2 points on a line (endpoints) and all the points between them on the line.
14. Mathematical sentences built from expressions using one or more equal signs.
15. A figure in which part of the figure has the same shape as the whole figure.
