- A point at which a graph intersects the y-axis.
- A figure in which part of the figure has the same shape as the whole figure.
- The result of infinitely many applications of a recursive procedure to a geometric figure.
- A measure of the steepness of a line on a graph.
- Mathematical sentences built from expressions using one or more equal signs.
- 2 points on a line (endpoints) and all the points between them on the line.
- Please Excuse My Dear Aunt Sally (parentheses, exponents, multiply/divide from left to right, add/subtract from left to right).
- The set of y-values of a function or relation.
- An angle on the interior of a plane figure.
- A procedure that you do over and over each time building on the previous stage.
- Not ordered and unpredictable.
- An expression used to calculate a desired result.
- The set of x-values that give rise to real y-values.
- Indicates how many times the base is to be used as a factor.
- To find the value of an expression.
- A symbol for an unknown number usually expressed as a letter.
