## 8th Grade CCSS Math Vocabluary Word Search 4

1. First, write the correct clue number to the left of each word in the Word Bank. Then, circle the words that have been hidden vertically, horizontally, and diagonally.

1. A line that intersects two or more lines in a given plane.
2. The original image before transformation.
3. The symbol used to represent the non negative square root of a number.
4. The number of cubic units needed to fill a sphere.
5. A measure of the steepness of a line on a graph.
6. A transformation created by sliding an object.
7. The number of cubic units needed to fill a cone.
8. A flat two-dimensional surface that goes in all directions forever
9. The side opposite the right angle. It is the longest side of a right triangle.
10. A transformation created proportionally by enlarging or reducing a figure.
11. A transformation created by reflecting (flipping) an image over a line.
12. A convincing demonstration that a mathematical statement is true.
13. Having the same size and shape.
14. A figure resulting from a transformation.
15. A transformation made by turning or spinning a figure around a given point.
16. In a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs $\left(A^{2}+B^{2}=C^{2}\right)$.

| translation | radical symbol | congruent |
| :--- | :--- | :--- |
| slope | plane | cone volume |
| Pythagorean Theorem | dilation | transversal |
| rotation | proof | image |
| sphere volume | pre-image | reflection |
| hypotenuse |  |  |
