1. An input-output relationship that has exactly one output (y-value) for each input (x-value).
2. An equation that makes a straight line when it is graphed.
3. A linear equation written in the form $y = mx + b$ (m represents slope and b represent the y-intercept).
4. The symbol used to represent the non negative square root of a number.
5. A value much greater or much less than the others in a set of data.
6. The number that is multiplied by the variable in an algebraic expression.
7. One of two equal factors (multiplication) of a number. It is the side of a square.
8. Involves the analysis of two variables for the purpose of determining a relationship.
9. A number that can not be expressed as a ratio of two integers or as a repeating or terminating decimal.
10. A function (equation) whose graph is not a straight line.
11. The number of cubic units needed to fill a cone.
12. A number that can be expressed as a ratio (fraction) of two integers.
13. One of three equal factors (multiplication) of a number. It is the side of a cube
14. Points where a line crosses the x-axis and y-axis.
15. A graph with points plotted to show a possible relationship between two sets of data.
16. A method of writing very large or very small numbers using powers of 10.

radical symbol
