1. An angle formed outside a polygon by extending one of its sides.
2. Having the same size and shape.
3. A figure resulting from a transformation.
4. A flat two-dimensional surface that goes in all directions forever
5. The number of cubic units needed to fill a cone.
6. The symbol used to represent the non negative square root of a number.
7. A transformation created by reflecting (flipping) 15 an image over a line.
8. The original image before transformation.
9. A line that intersects two or more lines in a given plane.
10. In a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs $\left(A^{2}+B^{2}=C^{2}\right)$.
11. The side opposite the right angle. It is the longest side of a right triangle.
12. A transformation created by sliding an object.
13. A transformation created proportionally by enlarging or reducing a figure.
14. A convincing demonstration that a mathematical statement is true.
15. The number of cubic units needed to fill a sphere.
16. A transformation made by turning or spinning a figure around a given point.
