

AP Biology Vocabulary Crossword Puzzle 11

1. Using the Across and Down clues, write the correct words in the numbered grid below.

ACROSS

4. The type of inheritance where the heterozygous individual has a blend of the dominant and recessive trait.
5. The polysaccharide that is how animals store glucose in their liver.
8. A set of alleles that determines the expression of a particular trait.
9. An organism that cannot manufacture its own food and instead obtains its food and energy by taking in organic substances.
10. The three carbon backbone molecule of the triglycerides.
11. The site of meiosis in humans that includes the ovaries and testes.
12. The increase in carbon dioxide and other gases causing heat to be trapped raising the temperature of the earth.
13. The one difference between the experimental group and the control group.

DOWN

1. A testable explanation for a question.
2. The description of an individual who has the same allele for a trait on both homologous chromosomes.
3. Pair of genes where one is dominant and one is recessive.
4. Behavior of an organism that is not learned and is genetically determined.
6. The weak intermolecular bond that forms between water molecules that causes them to "stick" to each other.
7. The condition in animals where they keep their internal environment constant for a specific characteristic often as a result of negative feedback.
9. Cells that have one copy of each kind of chromosome.

hydrogen bond
heterozygous
independent variable
innate
homeostasis

haploids
hypothesis
genotype
global warming
glycogen

heterotroph
homozygous
incomplete dominance
gonads
glycerol
