

AP Biology Vocabulary Crossword Puzzle 19

1. Using the Across and Down clues, write the correct words in the numbered grid below.

ACROSS

7. The theory that explains how a population changes over time to reflect the individuals who are most successful.
9. Membrane bound cell organelle that contains genetic material.
10. Proteins embedded in the cell membrane which allow organisms to differentiate between self and non-self cells.
11. The transport of molecules across the cell membrane without the use of energy.
12. The type of population growth where the population has reached the carrying capacity and stays at a relatively constant level as indicated by a J curve.
13. The hormone that lowers blood sugar by having it stored as glycogen in the liver and increasing cellular uptake.
14. The type of nuclear division that leads to four nuclei with a haploid complement of chromosomes produced from one diploid nucleus.
15. RNA made from DNA that carries the nucleotide template to the ribosome for protein synthesis.

DOWN

1. The type of nuclear division that leads to two nuclei with the entire diploid complement of chromosomes.
2. In eukaryotic cells it is the site of the Krebs cycle and electron transport chain of aerobic cellular respiration.
3. The gland that releases glucagon and insulin to help control blood sugar.
4. The monomer subunit that links together along the sugar phosphate backbone to form nucleic acids.
5. Bond formed between adjacent amino acids; between carboxyl group of one amino acid and amine group of other amino acid.
6. A change in the DNA either by changing a chromosome's structure or the order of nucleotides.
8. The physical appearance of an organism as a result of the interaction of its genotype and environment.

mutation

natural selection

nucleotides

mitosis

messenger RNA

insulin

nucleus

meiosis

pancreas

marker proteins

phenotype

peptide bond

mitochondria

passive transport

logistic growth
