

AP Biology Vocabulary Crossword Puzzle 25

1. Using the Across and Down clues, write the correct words in the numbered grid below.

ACROSS

1. The polysaccharide that is how animals store glucose in their liver.
6. The type of inheritance where the heterozygous individual has a blend of the dominant and recessive trait.
7. The increase in carbon dioxide and other gases causing heat to be trapped raising the temperature of the earth.
8. A testable explanation for a question.
9. An organism that cannot manufacture its own food and instead obtains its food and energy by taking in organic substances.
10. The weak intermolecular bond that forms between water molecules that causes them to "stick" to each other.
11. The one difference between the experimental group and the control group.
12. Pair of genes where one is dominant and one is recessive.
13. Cells that have one copy of each kind of chromosome.

DOWN

1. The site of meiosis in humans that includes the ovaries and testes.
2. A set of alleles that determines the expression of a particular trait.
3. Behavior of an organism that is not learned and is genetically determined.
4. The condition in animals where they keep their internal environment constant for a specific characteristic often as a result of negative feedback.
5. The description of an individual who has the same allele for a trait on both homologous chromosomes.
7. The three carbon backbone molecule of the triglycerides.

glycogen
hydrogen bond
homeostasis
heterotroph
gonads

homozygous
haploids
global warming
independent variable
incomplete dominance

heterozygous
innate
hypothesis
genotype
glycerol
