- A structure that allows an embryo to be nourished with the mother's blood supply.
- Basic units of DNA molecule, composed of a sugar, a phosphate, and one of 4 DNA bases.
- A molecule that is a constituent of the inner bilayer of biological membranes, having a polar, hydrophilic head and a nonpolar, hydrophobic tail.
- An organism that lives in or on another organism; one who lives off another person.
- An organism's physical appearance, or visible traits.
- A part of the cell containing DNA and RNA and responsible for growth and reproduction.
- A relationship between two organisms of different species where one benefits and the other is harmed.
- A growth response to light.
- A conglomeration of billions of cells specifically designed to provide a communication network within the human body.
- An organism that causes disease.
- An organism's particular role in an ecosystem, or how it makes its living.
- Tiny organisms that float in the water.
- Diffusion of water through a selectively permeable membrane.
- The movement of substances across a cell membrane without the use of energy by the cell.
- Toxic substances, such as lead or mercury, that specifically poison nerve cells.
