- An organism that eats tertiary consumers.
- An allele that is masked when a dominant allele is present.
- A group of similar organisms that can breed and produce fertile offspring.
- A selectively-permeable phospholipid bilayer forming the boundary of the cells.
- The ability to regrow a missing part of the body.
- The organ system that brings oxygen to body cells and removes waste gas.
- Succession that occurs on surfaces where no soil exists.
- The transfer of pollen from male reproductive structures to female reproductive structures in plants.
- An organism that eats producers.
- Type of succession that occurs in an area that was only partially destroyed by disturbances.
- A group of individuals that belong to the same species and live in the same area.
- Inhalation and exhalation of air.
- Nutrients the body uses to build and maintain its cells and tissues.
- A fine dust that contains the sperm of seed-producing plants.
- An organism that eats primary consumers.

respiration
secondary succession
regeneration
primary consumer
secondary consumer

pollination
recessive allele
quarternary consumer
species
pollen

respiratory system
population
proteins
primary succession
plasma membrane
