- |   |   |
|---|---|
| 1. Movement of molecules from an area of higher concentration to an area of lower concentration.    | 10. An allele whose trait always shows up in the organism when the allele is present.   |
| 2. A cross between individuals that have different alleles for the same gene.                       | 11. Transports oxygen, waste, nutrients, hormones, heat, etc... around the body.  |
| 3. Breakdown of food substances into simpler forms that can be absorbed and used.                   | 12. Scientific study of interactions among organisms and between organisms and their environment.   |
| 4. Can be hot or cold; receives less than 30 cm of precipitation per year.                          | 13. A specific sequence of three adjacent bases on a strand of DNA or RNA that provides genetic code information for a particular amino acid. |
| 5. Division of the cytoplasm during cell division.  | 14. All the different populations that live together in an area.  |
| 6. The bursting of a cell.  | 15. (of plants and shrubs) shedding foliage at the end of the growing season.   |
| 7. Forest populated by cone-bearing evergreen trees; mostly found in northern latitudes.            |   |
| 8. A jellylike fluid inside the cell in which the organelles are suspended.                         |   |
| 9. A relationship between two organisms in which one organism benefits and the other is unaffected. |   |
