- | | |
|---|--|
| 1. A relationship between two species in which both species benefit. | 9. An organism that has both male and female reproductive organs. |
| 2. RNA molecule that carries copies of instructions for the assembly of amino acids into proteins from DNA to the rest of the cell. | 10. Cell division that produces reproductive cells in sexually reproducing organisms. |
| 3. Part of eukaryotic cell division during which the cell nucleus divides. | 11. "Water-fearing"; pertaining to nonpolar molecules (or parts of molecules) that do not dissolve in water. |
| 4. Simple sugars (glucose, fructose, galactose). | 12. A small, round cell structure containing chemicals that break down large food particles into smaller ones. |
| 5. Long-term resting state that is an adaptation to winter cold and food scarcity. | 13. A cross between individuals that involves one pair of contrasting traits. |
| 6. A solution in which the concentration of solutes is essentially equal to that of the cell which resides in the solution. | 14. An electron carrier involved in photosynthesis. |
| 7. Thin layer of tissue that covers a surface, lines a cavity, or divides a space or organ. | 15. Energy-rich organic compounds, such as fats, oils, and waxes, that are made of carbon, hydrogen, and oxygen. |
| 8. All of the chemical reactions that occur within an organism. | |
