- The transfer of pollen from male reproductive structures to female reproductive structures in plants.
- A group of similar organisms that can breed and produce fertile offspring.
- An organism that eats producers.
- The ability to regrow a missing part of the body.
- The organ system that brings oxygen to body cells and removes waste gas.
- A fine dust that contains the sperm of seed-producing plants.
- An allele that is masked when a dominant allele is present.
- Succession that occurs on surfaces where no soil exists.
- An organism that eats primary consumers.
- A group of individuals that belong to the same species and live in the same area.
- Inhalation and exhalation of air.
- A selectively-permeable phospholipid bilayer forming the boundary of the cells.
- Type of succession that occurs in an area that was only partially destroyed by disturbances.
- An organism that eats tertiary consumers.
- Nutrients the body uses to build and maintain its cells and tissues.

recessive allele  
primary succession  
plasma membrane  
regeneration  
respiration

population  
respiratory system  
secondary succession  
pollination  
pollen

secondary consumer  
species  
quarternary consumer  
proteins  
primary consumer
