

Biology Vocabulary Crossword Puzzle 3

1. Using the Across and Down clues, write the correct words in the numbered grid below.

ACROSS

- Forest populated by cone-bearing evergreen trees; mostly found in northern latitudes.
- An allele whose trait always shows up in the organism when the allele is present.
- A cross between individuals that have different alleles for the same gene.
- A relationship between two organisms in which one organism benefits and the other is unaffected.
- (of plants and shrubs) shedding foliage at the end of the growing season.
- Breakdown of food substances into simpler forms that can be absorbed and used.
- All the different populations that live together in an area.
- Movement of molecules from an area of higher concentration to an area of lower concentration.
- Division of the cytoplasm during cell division.
- Transports oxygen, waste, nutrients, hormones, heat, etc... around the body.

deciduous
community
ecology
diffusion
cytokinesis

circulatory system
coniferous forest
desert
digestion
commensalism

DOWN

- A jellylike fluid inside the cell in which the organelles are suspended.
- Can be hot or cold; receives less than 30 cm of precipitation per year.
- The bursting of a cell.
- Scientific study of interactions among organisms and between organisms and their environment.
- A specific sequence of three adjacent bases on a strand of DNA or RNA that provides genetic code information for a particular amino acid.

cytoplasm
dihybrid cross
codon
cytolysis
dominant allele
