- The remains of plants and animals buried in the Earth. Created by millions of years of heat and pressure. Examples include coal, oil, and natural gas.
- Things that let electricity through easily (often metals).
- A behavior that an animal develops by observing other animals or by being taught.
- A change in the body or behavior of a species over a long period of time to help it survive in its environment.
- The process of moving sediment from one place to another.
- The process of wind or water breaking down rock into soil, sand, and other tiny pieces.
- The ability to do work or cause changes in matter.
- Light bouncing off of an object.
- A trait passed on from one generation to another such as eye color or hair color.
- A material that does not easily pass electrical or heat energy.
- The part of the experiment that is kept the same.
- Rock formed by sediment that is deposited in layers and formed over time. Fossils are often found in this type of rock.
- The process of dropping or depositing sediment in a new place.
- The bending of light when it passes from one substance into a different substance.
- The part of an experiment that is changed.
