1. Any living thing.
2. Life cycle of many insects with four stages: egg, larva, pupa, adult.
3. All living and nonliving things that interact with each other in an environment.
4. Two or more substances put together that can be easily separated.
5. Anything that has mass and takes up space.
6. To sort into groups by characteristic or property.
7. An organism that breaks down dead plants and animals. This allows nutrients to go back into the soil to be reused.
8. An organism that must eat another organism in order to get energy to survive.
9. Solid, liquid, and gas.
10. Recurring series of events that happens in nature.
11. The arrows between organisms in a food chain or food web that show the flow of energy. The arrow points to the organism that is receiving the energy.
12. A type of metamorphosis in which an insect hatches from an egg and then goes through several nymphal stages finally moulting into an adult form.
13. An organism that makes its own food using energy from the sun through a process called photosynthesis.
14. Refers to the movement of oxygen through the atmosphere, biosphere and the lithosphere.
