- An organism that makes its own food using energy from the sun through a process called photosynthesis.
- An organism that breaks down dead plants and animals. This allows nutrients to go back into the soil to be reused.
- The arrows between organisms in a food chain or food web that show the flow of energy. The arrow points to the organism that is receiving the energy.
- Recurring series of events that happens in nature.
- All living and nonliving things that interact with each other in an environment.
- An organism that must eat another organism in order to get energy to survive.
- To sort into groups by characteristic or property.
- Life cycle of many insects with four stages: egg, larva, pupa, adult.
- Any living thing.
- Solid, liquid, and gas.
- A type of metamorphosis in which an insect hatches from an egg and then goes through several nymphal stages finally moulting into an adult form.
- Refers to the movement of oxygen through the atmosphere, biosphere and the lithosphere.
- Anything that has mass and takes up space.
- Two or more substances put together that can be easily separated.
