- |   |  |
|---|--|
| 1. A natural resource that can be replaced.   | 9. Heat energy.  |
| 2. A type of rock that forms from the cooling of molten rock at or below the surface. | 10. The transfer of energy by electromagnetic waves.                                   |
| 3. A factor that can change in an experiment.   | 11. The energy of motion.  |
| 4. Reproduction that requires two organisms.  | 12. A logical procedure for gathering and testing ideas.                               |
| 5. Group of similar cells that perform a particular function.                         | 13. Rock that has been changed by heat and pressure.                                   |
| 6. Control center of the cell which contains DNA.                                     | 14. A rock formed by layers of sediments squeezed and stuck together over a long time. |
| 7. Materials found in nature that cannot be renewed or replaced.                      | 15. Energy of position; stored energy.   |
| 8. The amount of matter in an object, not how much it weighs.                         | 16. Variable that is changed in an experiment.   |
|   | 17. Statement about how things work in nature that seems to be consistently true.      |

renewable resource  
sedimentary rock  
igneous rock  
scientific method  
radiation  
nucleus

variable  
thermal energy  
sexual reproduction  
metamorphic rock  
law  
mass

nonrenewable resource  
potential energy  
kinetic energy  
tissue  
independent variable
