- The force of air molecules pushing on an area.
- A process of ecological change in which a series of natural communities are established and then replaced over time.
- Air is heavy, and it sinks. Causes sunny pleasant weather.
- Rocks that arise from the transformation of existing rock to new types of rock.
- Warmer temperatures approaching.
- A large volume of air that has nearly the same temperature and humidity at different locations at the same altitude.
- Rock formed from sediments compacting and cementing.
- A seafloor mountain system formed by plate tectonics.
- Cooler temperatures approaching.
- Sinking of the Earth's surface.
- Movement of air relative to the surface of the Earth.
- The action of surface processes (such as water flow or wind) that removes soil, rock, or dissolved material from one location on the Earth's crust, and then transports it to another location where it is deposited.
- Air is usually rising. Rain, storms, severe weather is possible.
- Movement of Earth's crust.
- Hardy species that are the first to colonize barren environments.
