- Warmer temperatures approaching.
- Sinking of the Earth's surface.
- Air is usually rising. Rain, storms, severe weather is possible.
- The action of surface processes (such as water flow or wind) that removes soil, rock, or dissolved material from one location on the Earth's crust, and then transports it to another location where it is deposited.
- The force of air molecules pushing on an area.
- Air is heavy, and it sinks. Causes sunny pleasant weather.
- Hardy species that are the first to colonize barren environments.
- Rock formed from sediments compacting and cementing.
- Movement of Earth's crust.
- A large volume of air that has nearly the same temperature and humidity at different locations at the same altitude.
- Cooler temperatures approaching.
- A process of ecological change in which a series of natural communities are established and then replaced over time.
- Movement of air relative to the surface of the Earth.
- Rocks that arise from the transformation of existing rock to new types of rock.
- A seafloor mountain system formed by plate tectonics.

erosion
cold front
succession
air pressure

land subsidence
wind
warm front
sedimentary rock

plate tectonics
air mass
low pressure
mid-ocean ridge

pioneer species
metamorphic rock
high pressure
