1. Cells that do contain a nucleus.

2. Balls of ice and dust.

3. The organization of the elements based on atomic number.

4. A large collection of stars and solar systems theoretically revolving around a black hole; they come in spirals, ellipticals and irregular shapes.

5. Organisms that must hunt and eat other organisms to survive; do not make their own food.

6. One parent; cloning; identical offspring to the parent.

7. A unit of distance to measure the distance between stars and galaxies.

8. Irregular shaped space rocks; primarily found in the Kuiper Belt.
9. Sometime called falling stars. These bodies enter our atmosphere all the time mostly breaking up as they enter.

10. Cells that do not contain a nucleus.

11. Two parents; sperm and egg cells combine to form a new organism.

12. The amount of mass in a given volume.

13. The intrinsic brightness of a celestial object.

14. Large balls of gas burning in space; these balls of gas are primarily hydrogen and helium.

15. Organisms that make their own food through photosynthesis.

periodic table	stars	heterotrophs	meteors
asexual reproduction	density	luminosity	light years
prokaryotic	eukaryotic	galaxy	autotrophs
asteroid	sexual reproduction	comets
