- A process of ecological change in which a series of natural communities are established and then replaced over time.
- Sinking of the Earth's surface.
- A large volume of air that has nearly the same temperature and humidity at different locations at the same altitude.
- Air is heavy, and it sinks. Causes sunny pleasant weather.
- Cooler temperatures approaching.
- Warmer temperatures approaching.
- The action of surface processes (such as water flow or wind) that removes soil, rock, or dissolved material from one location on the Earth's crust, and then transports it to another location where it is deposited.
- Movement of air relative to the surface of the Earth.
- The force of air molecules pushing on an area.
- Air is usually rising. Rain, storms, severe weather is possible.
- Movement of Earth's crust.
- Rock formed from sediments compacting and cementing.
- A seafloor mountain system formed by plate tectonics.
- Hardy species that are the first to colonize barren environments.
- Rocks that arise from the transformation of existing rock to new types of rock.

high pressure
pioneer species
erosion
cold front

warm front
sedimentary rock
succession
air pressure

wind
metamorphic rock
land subsidence
low pressure

air mass
mid-ocean ridge
plate tectonics
