

Chemistry Terms Review Crossword Puzzle 3

1. Using the Across and Down clues, write the correct answer in the numbered grid below.

ACROSS

- A type of radiation consisting of two protons and two neutrons.
- The process where a liquid changes into a gas.
- The loss of electrons in a reaction.
- The substance that is dissolved in a solution.
- A process used to separate solids from liquids using a filter.
- The amount of solute in a given amount of solvent.
- A state of matter with no fixed shape or volume.
- Substance that speeds up a chemical reaction without being consumed.
- The small building block that makes up polymers.
- A potent greenhouse gas produced by livestock and decay of organic matter.
- The process by which cells convert glucose and oxygen into energy.

DOWN

- A large molecule made up of repeating units.
- The force that holds atoms together in a molecule.
- A type of synthetic polymer.
- A state of matter similar to gas but consisting of charged particles.
- Fuel derived from biological sources like plants.
- The calculation of reactants and products in chemical reactions.
- A chart of the elements arranged by atomic number.
- The chemical breakdown of a substance by bacteria, yeasts, or other microorganisms.
- The gradual destruction of metals by chemical reactions with the environment.
- A measure of acidity or alkalinity of a solution.
- A state of matter with a definite shape and volume.
- A neutral particle in an atom's nucleus.
- A solution where the solvent is water.

plastic

polymer

pH scale

neutron

corrosion

catalyst

aqueous

alpha particle

fermentation

respiration

gas

periodic table
